

Teamcenter Engineering Solutions

Valtech advises customers in mapping their own processes and procedures in their IT system to create added value. Valtech is a Teamcenter service partner and supports you in choosing a system, analyzing requirements, and rolling out, adapting, integrating and extending the Teamcenter engineering platform.

Furthermore, Valtech’s experts will be happy to advise you on the following topics:

- Rule-based product configuration
- Project controlling with a link to product structure
- Virtual project house for product development projects
- Different views on product structures in the respective collaboration context
- Link of product requirements to the product and process structure

Teamcenter is a combination of solutions for digital product lifecycle management based on an open PLM platform. This allows the management of ideas and the planning of requirements to be integrated in the processes of digital lifecycle management, product development, and production.

Teamcenter links OEMs, partners and suppliers with secure, worldwide access to your product knowledge and enables consistent and reproducible processes. The data is held in a shared repository and made available to users by means of a hierarchical authorization concept.

Teamcenter is produced by Siemens PLM Software, formerly known as UGS PLM Solutions. Teamcenter Software is established worldwide – with about four million users – as undisputed market leader in the PLM world.
